SALES ANALYSIS

Sales data, turned into decisions.

Full year 2021 sales performance review

$985K revenue · 832 transactions · 40 customers · 15 countries

01 · The brief

Where did 2021 revenue come from and where did it fall short?

The question driving this work:

A full year of sales transactions sits in one spreadsheet. Operations knows what shipped. Finance knows what came in. Neither view alone answers the questions leadership actually asks. Which months hit target. Which customers carry the book. Which products earn their shelf space. Which countries deserve more investment and which are underperforming. This analysis brings the data into one model and gives those answers.

What sits underneath the dashboard

INPUT DATA

Transaction log

832 sales transactions across full year 2021

10 fields per row: date, customer, product, unit price, quantity, actual revenue, country, region, month, week

Clean source data, no deduplication required

SUPPORTING TABLES

Target and Customer

Target sheet: monthly revenue targets with variance calculations

Customer sheet: 40 customers mapped to 15 countries across 7 regions

Used for joins and benchmark comparisons in the dashboard

The year in six numbers

$985K

Total revenue earned

-$95K

Below the $1.08M target

4 of 12

Months that hit target

$532K

From Export region alone

40

Active customers in 2021

46%

Revenue from India alone

The year missed target by 8.8%, with Export carrying the load

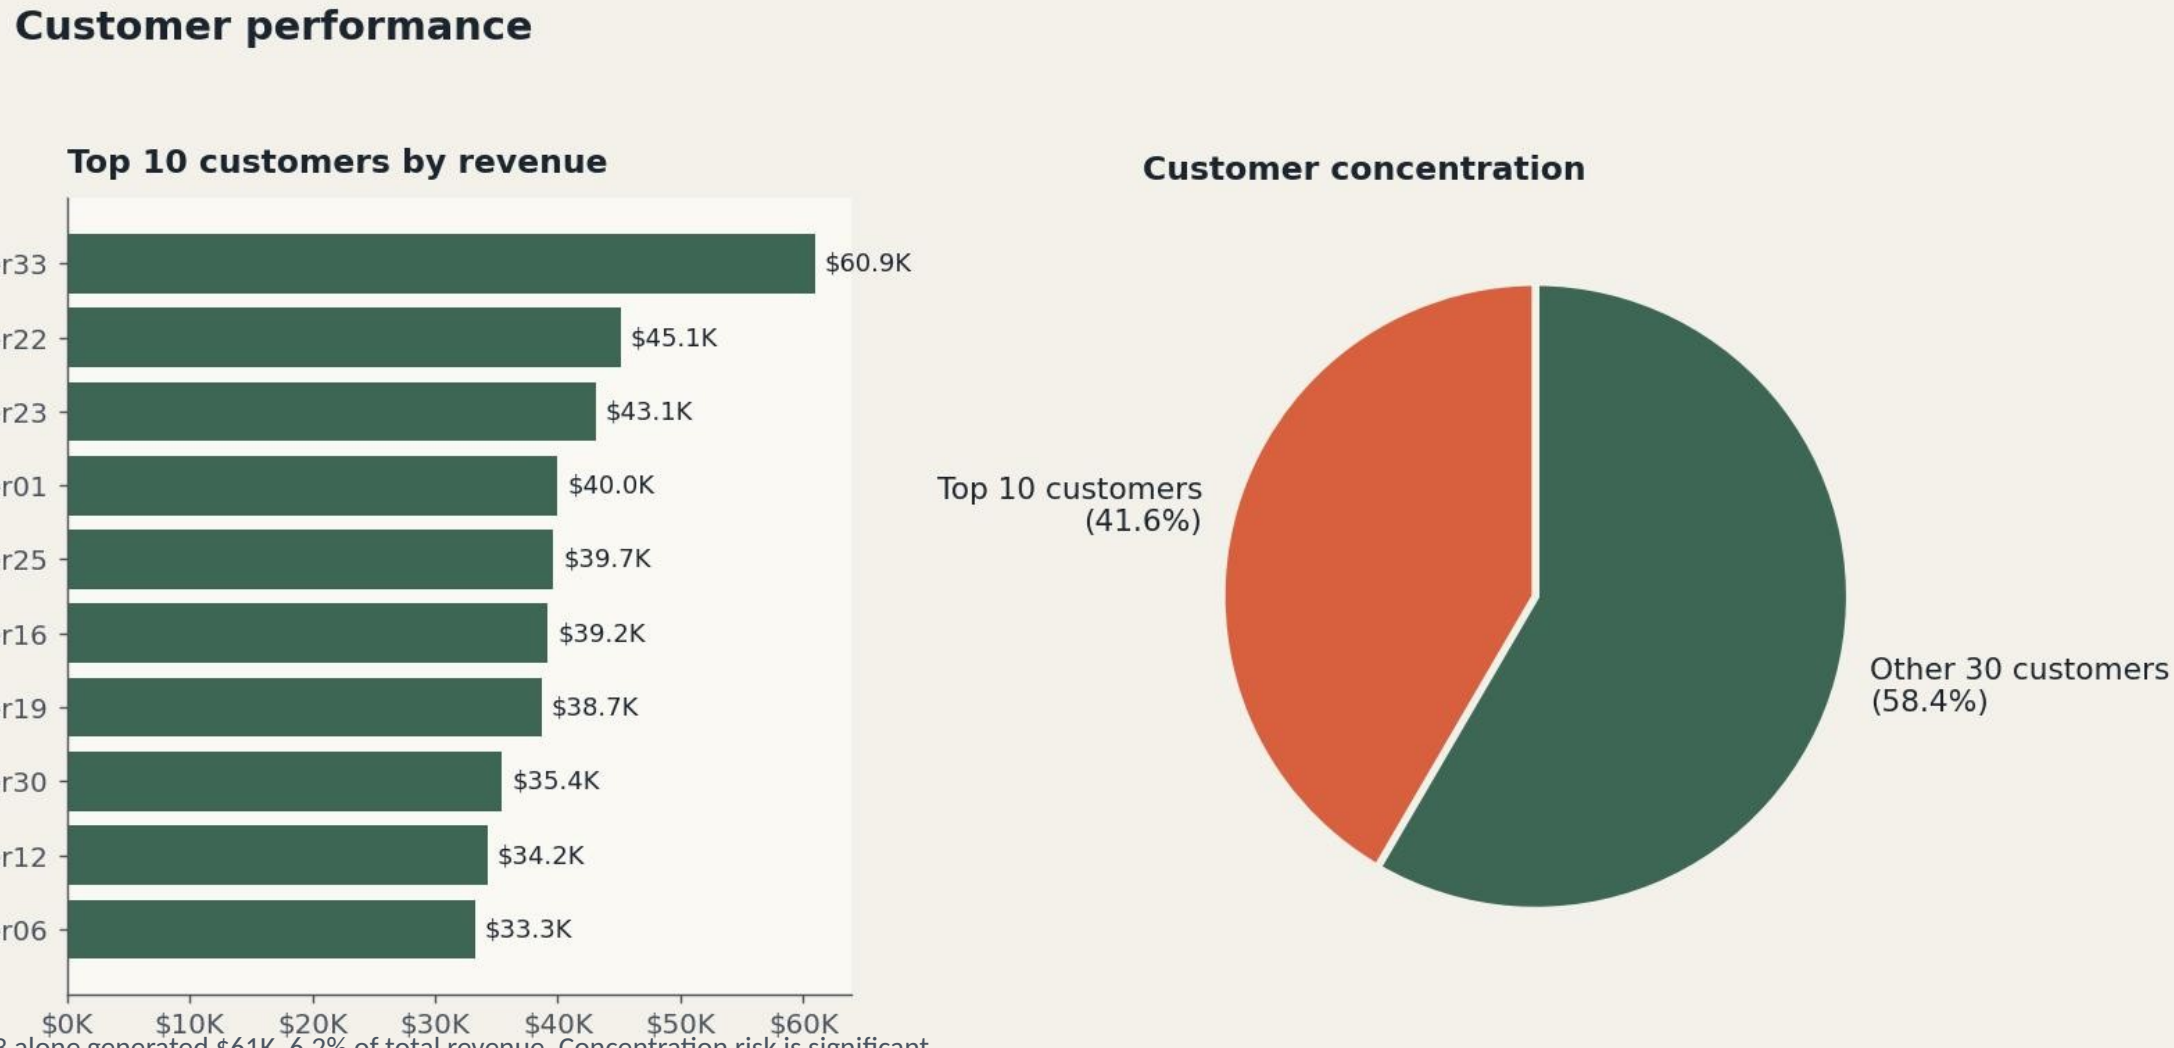

Export region delivered $532K, more than four times the next region. The book is geographically concentrated.

Strong start, midyear collapse, late recovery

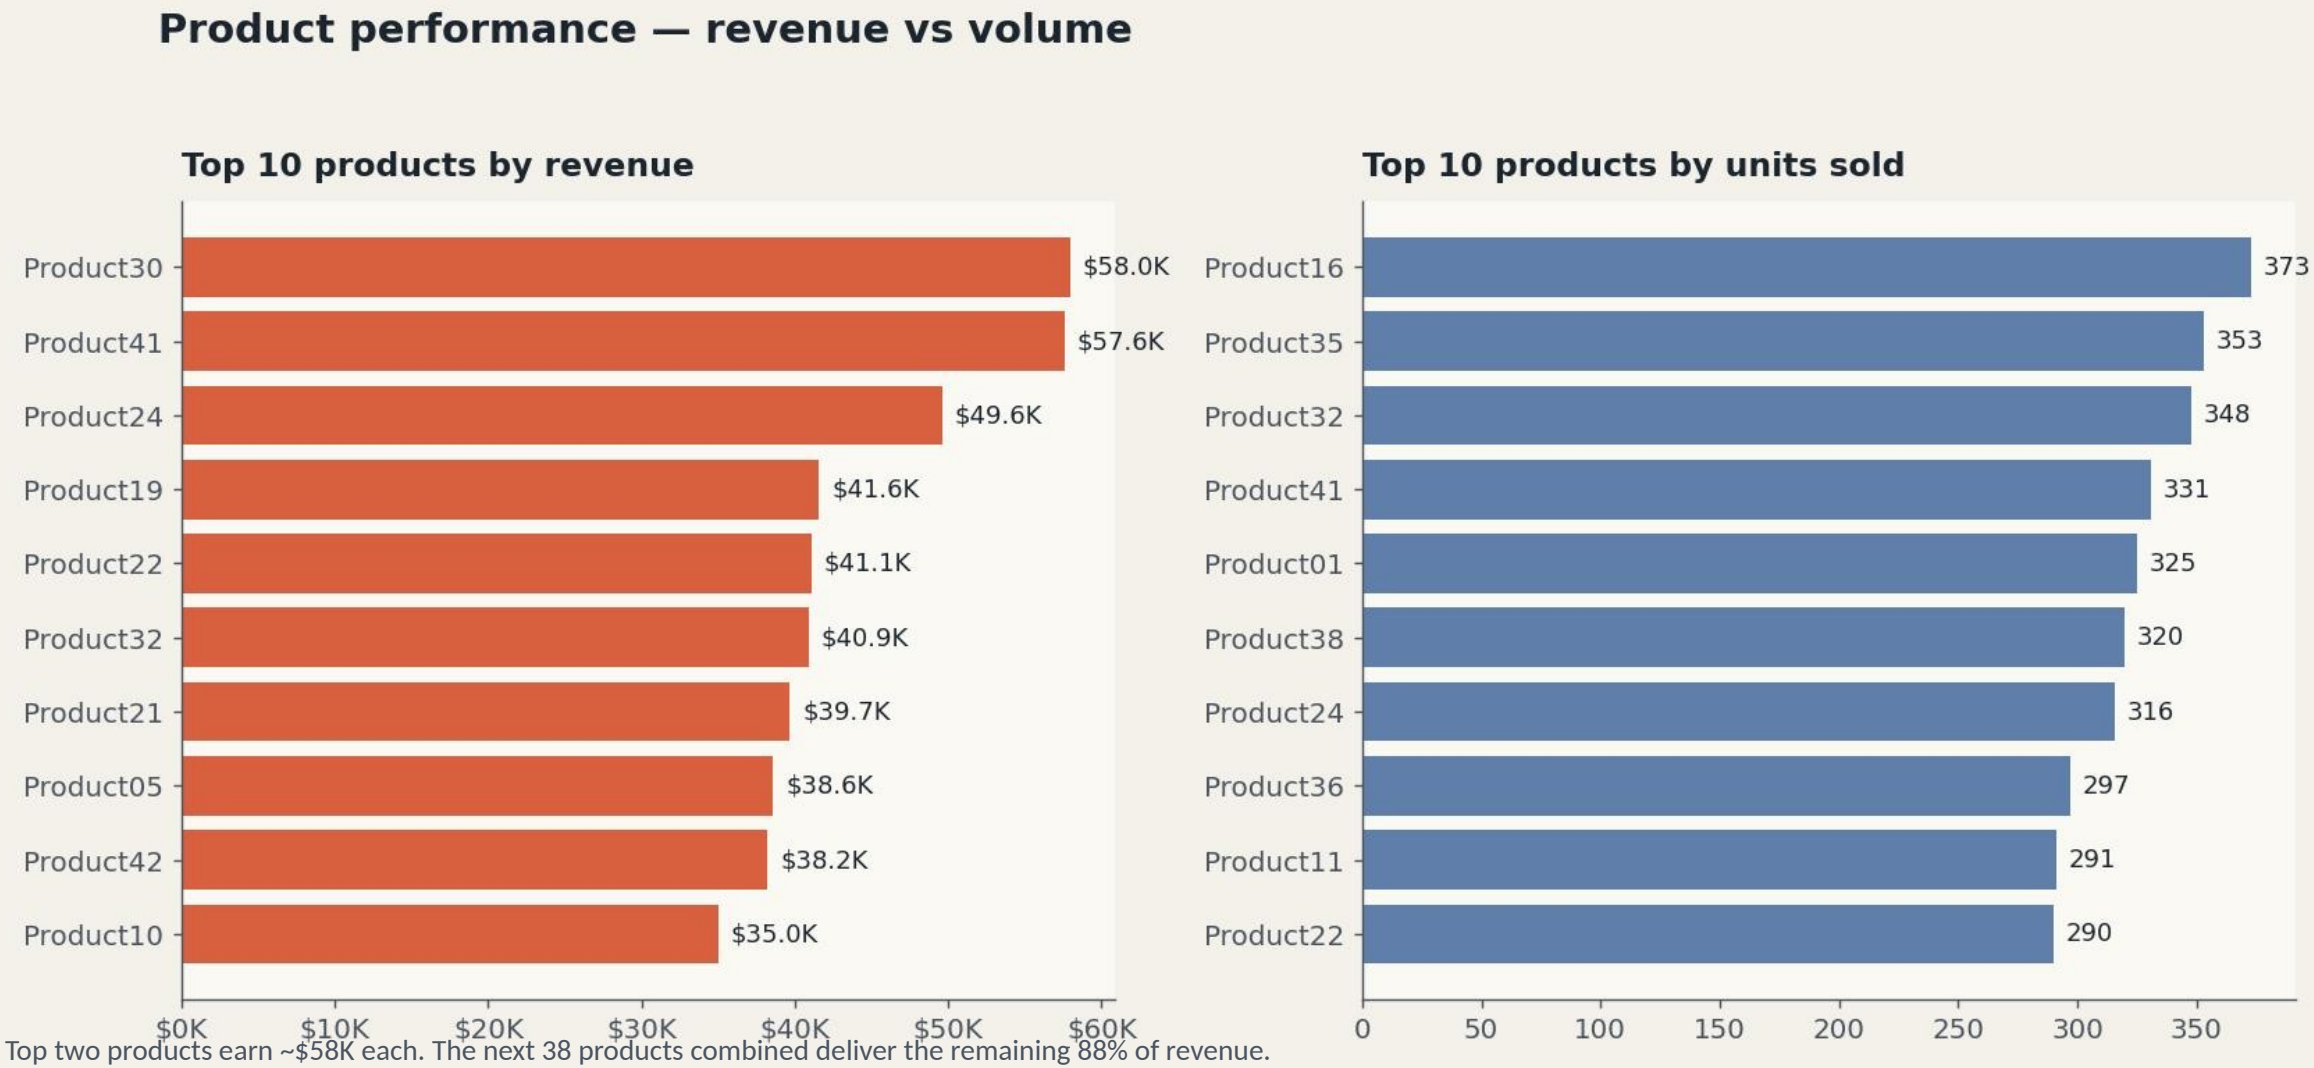

Q1 hit close to target. April through September dropped 20-30% below. Q4 recovered only partially.

Top 10 customers carry 53% of revenue

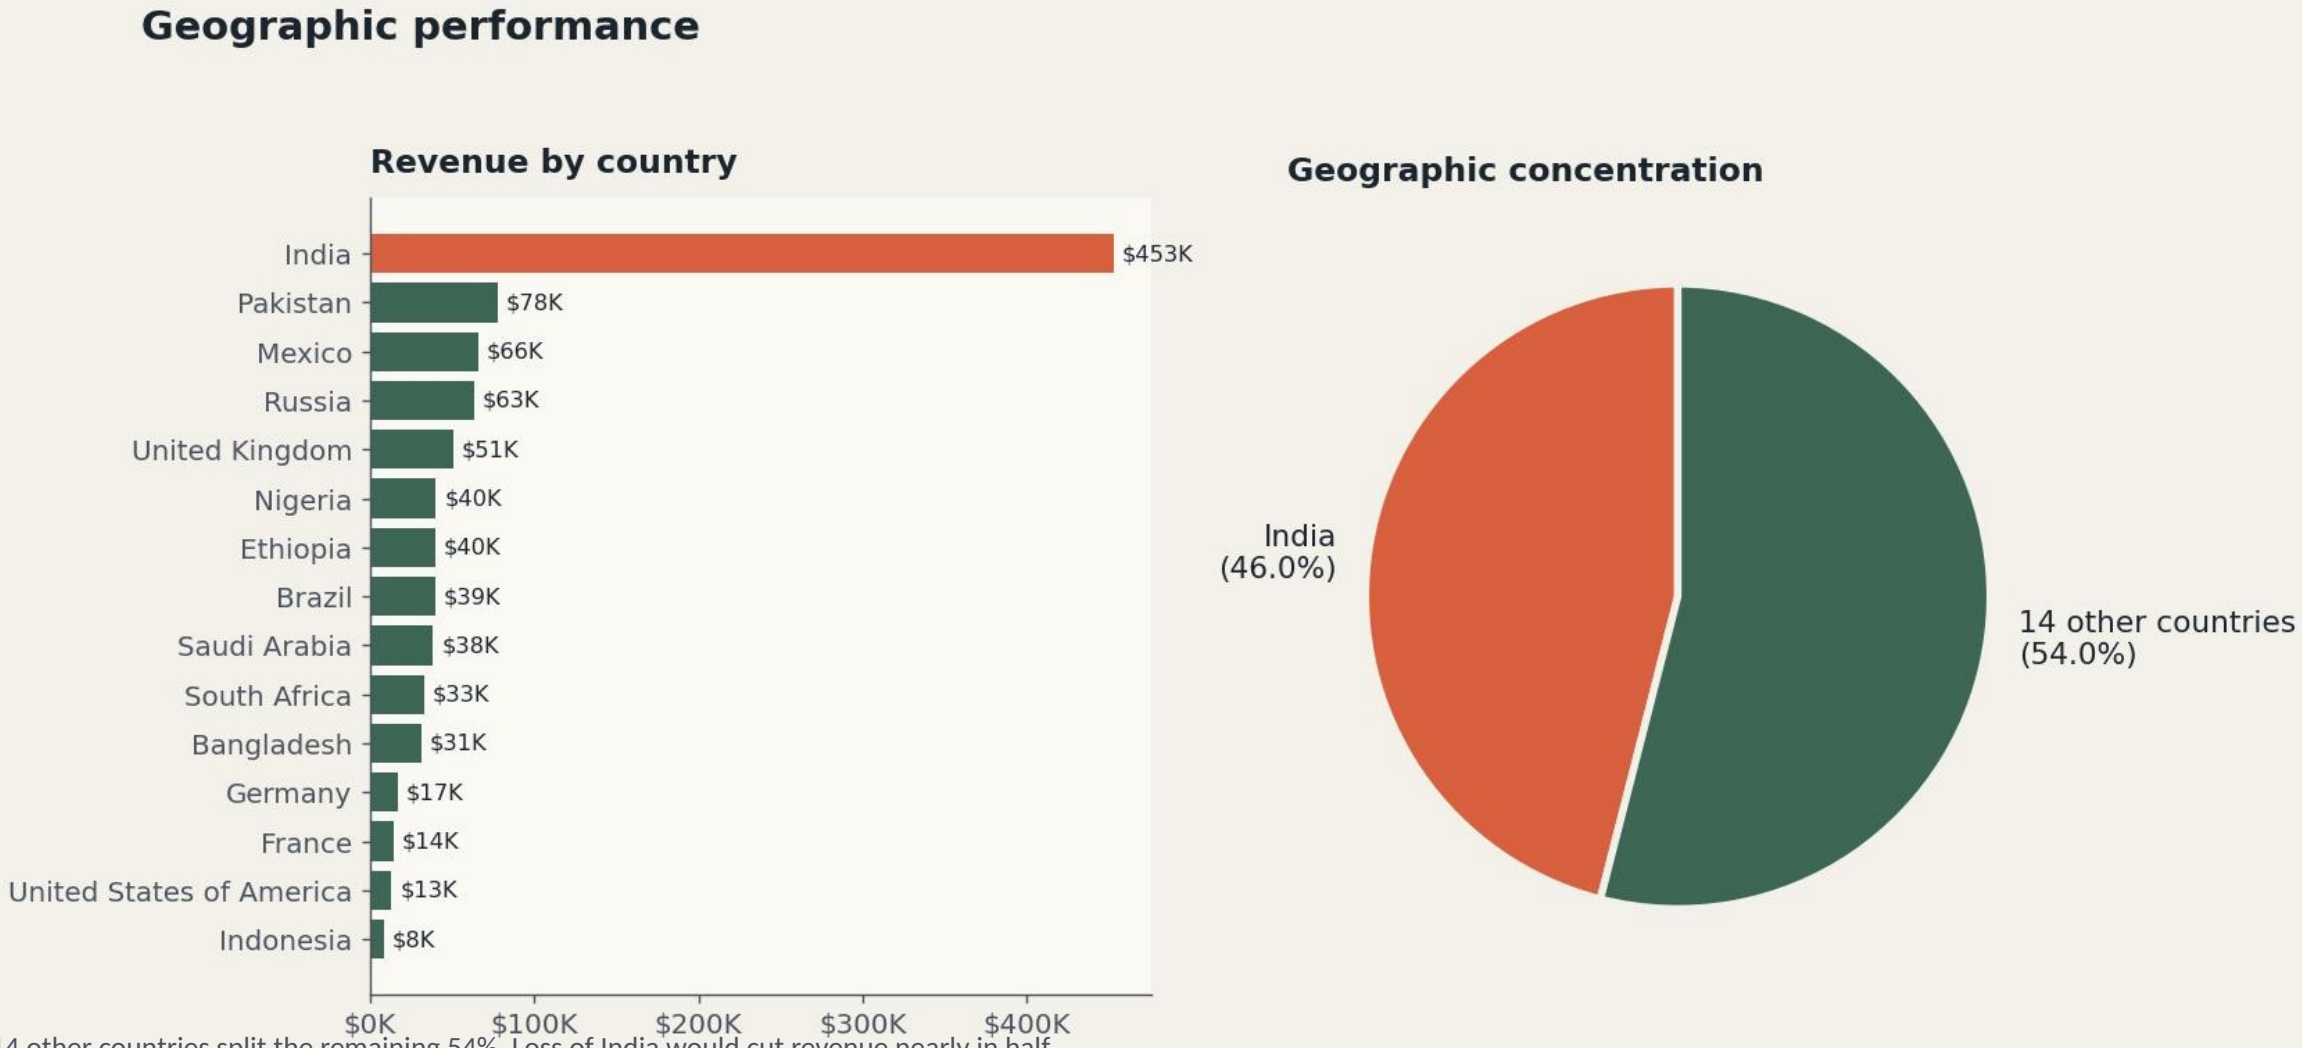

Customer33 alone generated $61K, 6.2% of total revenue. Concentration risk is significant.

Product 30 and 41 lead, but the long tail matters

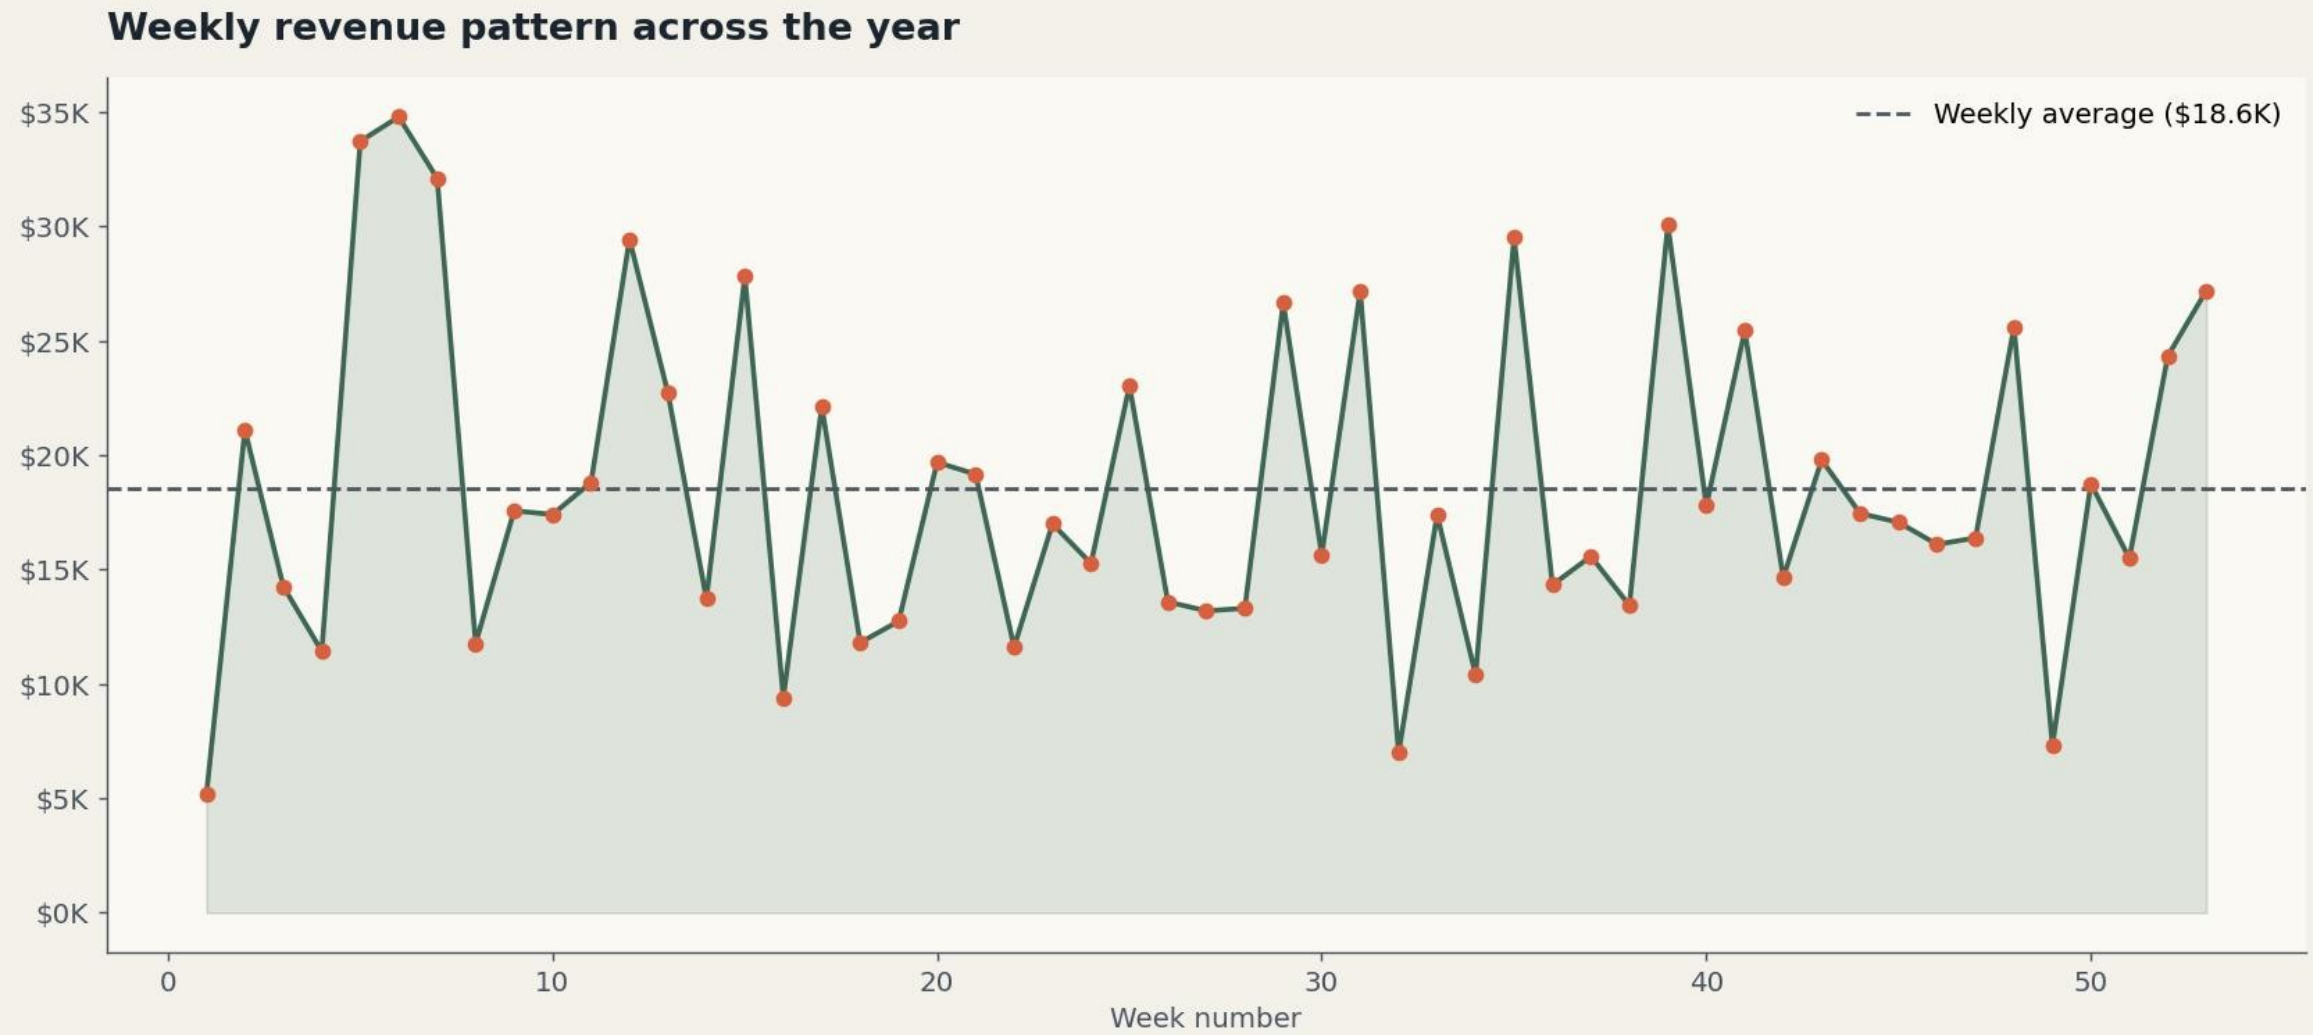

Top two products earn ~$58K each. The next 38 products combined deliver the remaining 88% of revenue.

India dominates at 46% of revenue

14 other countries split the remaining 54%. Loss of India would cut revenue nearly in half.

Revenue swings widely week to week

No clear seasonality. Week-to-week variance suggests revenue depends on a few large transactions, not steady volume.

What the numbers say

01 The year missed target by 8.8%

Total revenue of $985K against a $1.08M target. Only 4 of 12 months hit their monthly number.

02 Export is the business, not a side bet

Export region alone delivered $532K, 54% of total revenue. Removing Export would gut the year.

03 India is the single biggest country exposure

India contributed $453K, 46% of revenue. The remaining 14 countries split the other 54%.

04 Customer concentration is high

The top 10 customers carry 53% of revenue. Losing any one of them moves the needle.

05 Midyear performance collapsed

April through September averaged $75K monthly against a $93K target. Something specific happened in Q2 and Q3.

What to do next

01 Diagnose the Q2-Q3 revenue drop

Six straight months under target is not seasonality. Find the cause: sales team capacity, product issue, or a lost account.

High

02 Build a top-10-customer retention plan

53% of revenue from 10 accounts is a risk that needs active management. Set up quarterly health checks.

High

03 Diversify beyond India

46% concentration in one country is fragile. Set a 3-year goal to bring India under 35% of revenue.

Medium

04 Recalibrate monthly targets

Q4 targets were set 11% lower than Q1. If that was deliberate, document why. If not, fix the planning process.

Medium

05 Add customer profitability tracking

Revenue tells only half the story. Pair it with margin per customer to find which big accounts are actually profitable.

Low

How it was built

Excel	Source data storage, pivot tables, dashboard layout
Power Query	Date parsing, month and week derivation
Pivot Tables	Aggregation by customer, product, region, country and time
Slicers	Cross-filter the dashboard by region, country and month
Conditional Formatting	Above and below target highlighting in monthly views

CLOSING

When the foundation is right, the dashboard is the easy part.
